

Andrew H. Sutherland

SENIOR FRONT-OFFICE QUANT-DEVELOPER · RATES, FI, FX & VOL · TECHNOLOGY LEADERSHIP

92 Blake Road, London N11 2AL (+44) 07751 148806 andrew.h.sutherland@gmail.com

US / UK Dual Citizen

PROFILE

Senior front-office quant-developer with nearly 30 years of hands-on experience across rates, FX, equities and vol at major banks and hedge funds. Expert in yield curve construction, pricing and risk for linear and non-linear products, with a track record of designing and delivering complex analytical platforms from scratch. Currently sole quant-developer on a \$2B AUM fixed-income desk, responsible for a proprietary analytics platform in C# covering curves, pricing and a wide range of interactive tools.

Experienced leading teams of up to 12 across multiple geographies, working on complex systems with tight deadlines. Early adopter of AI-assisted development workflows, which now drive most of the new feature delivery. Equally effective as a hands-on architect or a technical leader bridging trading desks and engineering teams. I thrive in collaborative, delivery-focused environments.

KEY CAPABILITIES

Quantitative Analytics Yield curve construction (single & cross-currency), swap/swaption pricing & risk, FX options, VaR, real-time analytics with parallel computation.	Systems Architecture Greenfield platform design in C#/.NET, large-scale Java (Spring Boot), high-performance C/C++, Python/R for analysis and automation.
Technical Leadership Teams of up to 12 across EU/US; stakeholder management, Kanban workflow, multi-year modernisation programmes; architecture governance.	AI-Assisted Development Agentic coding as primary development workflow; Anthropic API integration for natural-language interfaces; practical LLM deployment in a regulated front-office environment.

EXPERIENCE

Technical Desk Quant

Jan 2026 – Present

Tudor Investment Corporation, London

Sole quant-developer on a \$2B AUM fixed-income desk (team of 4). End-to-end ownership of a proprietary analytics platform covering curves, pricing, risk and interactive tools.

- Designed and built a greenfield fixed-income analytics platform in C# — curve-building, historical pricing, interactive tools with fast parallel computation. 100% sole-architected.
- Platform serves as the desk's primary analytical toolkit, with interfaces for Excel (Excel-DNA), desktop and web, enabling rapid interactive analysis across the full product range.
- Early adopter of AI-assisted development: agentic coding now drives the majority of new feature delivery, and LLM integrations (Anthropic API) provide natural-language access to desk analytics.

Head of Pricing Analytics / Front-Office Architecture

Nov 2022 – Dec 2025

Tudor Investment Corporation, London

Led the multi-year modernisation of Tudor's core pricing and risk systems. Hands-on architect, developer, team leader and project manager. Java (90%), C#, Python.

- Architected and drove a complete rebuild of the pricing platform: distributable pricing models, record-and-replay parameters, and maximal transparency with feeds to Excel/Python and key applications.
- Deep expertise in curve-building (single and cross-currency), pricing and risk of swaps, basis swaps, swaptions, FX vol products, and fixed income.
- Led team of 12 developers across Europe and US. Ran stakeholder groups, organised workflow, status reporting and project management using a Kanban approach with long-term goals overlaid.

Lead Engineer, Macro Front Office

Apr 2018 – Oct 2022

Balyasny Asset Management, London

Key architect of BAM's Macro post-trade pricing and risk platform. Modernised a legacy C codebase into an enterprise system. Rates, FI & FX. C/C++/Python.

- Lead developer in a global team of 5–6; functional lead of the Turbo workstream (global team of 9).
- Led re-engineering of curve-fitting, market data distribution, and interest rate risk (forward-wave approach). Personally rewrote core yield curve fitting code and added cross-currency support.

EARLIER CAREER

A consistent track record across front-office technology, quantitative development, and leadership at major institutions:

Dates	Role	Firm	Focus
2017–2018	IT Business Analyst (MIFID II)	UBS	Regulatory
2016	R Developer / Business Analyst	Credit Suisse	Equity Risk
2014–2016	Senior BA / Project Manager	J.P. Morgan	Equity Finance
2012–2014	Senior Developer, Fixed Income	Morgan Stanley	FI Front Office
2006–2011	Development Manager, FX IT	HSBC	FX / PB Risk
2003–2006	Partner / Project Manager	Vichara Technologies	Consultancy
2002–2003	Team Lead, Commodity Derivs	Barclays Capital	Exotic Derivs
2001–2002	Derivatives Trader	Citigroup	Hybrid / Structured

Dates	Role	Firm	Focus
1996–2000	Quant / Developer, Rates	Citibank / Salomon	Exotic Rates

TECHNOLOGY

Languages	C# (.NET) — primary; Java (Spring Boot, 21) — large-scale; C/C++ (C++17, STL) — high-performance; Python, R — analysis & automation
Quant / Finance	Yield curve construction, cross-currency curves, swap/swaption pricing & risk, FX forwards/options, VaR, real-time analytics, record-and-replay frameworks
Platforms	Excel-DNA, desktop & web interfaces, distributed computation, market data systems, multi-environment deployment
AI / LLM	Agentic coding as primary development workflow; Anthropic API for natural-language interfaces; practical deployment of LLM tooling in regulated finance

EDUCATION

J.D. (Doctor of Law), 1995

University of Virginia, Charlottesville, VA, USA

B.A. Physics & Computer Science, 1985

Swarthmore College, Pennsylvania, USA
